LOUISIANA BIRD RECORDS COMMITTEE

REPORT FORM

This form is intended as a convenience in reporting observations of species on the Louisiana Bird Records Committee (LBRC) Review List. The LBRC recommends the use of this form or a similar format when submitting records for review to assure that all pertinent information is accounted for. <u>Attach additional pages or files as necessary</u>. Please print or type for hard copy. For electronic copy, be sure to save this file to your computer before entering text. Attach field notes, drawings, photographs, or tape recordings, if available. Include all photos for more obscurely marked species. When completed (if hard copy), mail to Secretary, Louisiana Bird Records Committee, c/o Museum of Natural Science, 119 Foster Hall, Louisiana State University, Baton Rouge, LA 70803-3216, or e-mail electronic copy as an attachment to Paul Edward Conover at <<u>zoiseaux@lusfiber.net</u>.

- 1. English and Scientific names: Brown Booby, Sula leucogaster
- 2. Number of individuals, sexes, ages, general plumage (e.g., 2 in alternate plumage):
- 1 adult plumage
- 3. Parish: Jefferson
 - Specific Locality: mile marker 9.9 on Causeway North bound
- 4. Date(s) when observed: September 3, 2016
- 5. Time(s) of day when observed:9:55AM

6. Reporting observer and address: Dr. Lehman Ellis, 4123 Woodland Dr., University of Holy Cross, New Orleans, LA 70131

7. Other observers accompanying reporter who also identified the bird(s): none

8. Other observers who independently identified the bird(s): none

9. Light conditions (position of bird in relation to shade and to direction and amount of light): clear

10. Optical equipment (type, power, condition): none

11. Distance to bird(s): 100 meters at closest point

12. Duration of observation: 10 to 15 seconds

13. Habitat: Over Lake Pontchartrain

14. Behavior of bird / circumstances of observation (flying, feeding, resting; include and stress habits used in identification; relate events surrounding observation): Flying south to North with slight banking to the right and left so both dorsal and ventral views were seen

15. Description (include only what was actually seen, *not what "should" have been seen;* include if possible: total length/relative size compared to other familiar species; body bulk, shape, proportions; bill, eye, leg, and plumage characteristics. Stress features that separate it from similar species, *or for species that are known to hybridize frequently, stress features that help eliminate possible hybrids*): Large seabird. Dark head, back, tail dorsal surface of wings and most of ventral surface. Ventral surface of body below the throat and upper chest was white from a point just forward of the wings to the vent and extending into axilla for a short distance. Bill was conical and white and overall profile of bird was tapered front and back. Wings were relatively long and tapered to a point. Wing tips were not rounded and wing was a long slender profile..

16. Voice: none

17. Similar species (include how they were eliminated by your observation): bird was smaller than a Pelican and bill was completely wrong as was the color pattern, was not a dark-backed gull and dark head would not be consistent with those species. Color pattern reminiscent of Tricolored Heron but bill, head shape, and wing shape were wrong plus the birds was clearly seen even if for a short time and was not a heron. Terns were also not consistent with the observed bird where color and size were wrong.

18. Photographs or tape recordings obtained? (by whom? attached?): Not possible under observation conditions

19. Previous experience with this species: I have seen this species in Louisiana last year, the Caribbean and in Hawaii on several occasions

20. Identification aids: (list books, illustrations, other birders, etc. used in identification): none

a. at time of observation: none

b. after observation: None

21. This description is written from:

	notes made during the observation.	Are notes attached?	
	notes made after the observation.	At what date?	
Х	memory		
	study of images		

22. Are you positive of your identification? If not, explain: I exclaimed to my wife that the bird was a Booby immediately. She was unaware that this was a rare sighting and said "so what you have seen them before", to which I replied that even though this could be the same bird as last year it still deserved reporting.

23. Date: September 3, 2016 Time: 9:55 AM

24. May the LBRC have permission to display this report or	
portions of this report on its website?Yes	
If yes, may we include your name with the report?Yes
